

Polydioxanone (PDO)

Provides the perfect balance between strength and softness in cosmetic sutures; PDO threads are the 'workhorse' of lifting. Aesthetic results have been reported to last up to 18-24 months.

Polycaprolactone (PCL)

The cashmere of sutures! While lower in tensile strength than PDO and PLLA, PCL offers the softest, most natural results by creating more Collagen I and III than PDO and PLLA threads. Aesthetic results have been reported to last up to 24-48 months.

Poly(L-lactic acid) (PLLA)

As a known bio-stimulatory dermal filler, PLLA creates a stronger suture than PCL and allows practitioners to add volume during treatments using threads with an aesthetic duration of 18-24 months.

The information compiled and printed here has been provided by users of Les Encres threads and other sources. This information is offered as a sample for your reference only and is not intended to represent the best or only approach to any particular treatment.
